🐙 @malnoe

COMPUTER SC.

- **Coding**
R, Python, Julia, SQL
- **PowerBI**
- **Text**
LaTeX, LibreOffice

LANGUAGES

- **French**
Native
- **English**
C1 - 7.5 IELTS
(February 2023)

INTERESTS

- **Associative engagement**
Organisation of an event to promote mathematics and computer science studies among secondary school girls (RJMI, 2024)
- **Academic engagement**
Member of the Mathematics Bachelor's Improvement Committee
- **Role-playing games**
- **Reading**

EDUCATION

Statistics and Data Science Master's degree - Université Grenoble Alpes
September 2024 - Currently

- Machine learning, statistical modelling (GLM, mixed models), natural language processing, statistical inference, computational statistics, spatial statistics, high-dimensional statistics, databases, etc.
- Programming (R, Python, Julia and SQL) and Power BI.
- Top of the class in first year.
- Recipient of the EFELIA MIAI scholarship from the MIAI Institute in second year.

Magistère 1 in mathematics - ENS Rennes and Université de Rennes
September 2023 - May 2024

- Third year bachelor's degree, fundamental mathematics specialisation.
- Research reading group on epidemic modelling (ordinary differential equations).

1st and 2nd year bachelor's degree of mathematics - Université de Rennes
September 2021 - May 2023

- Top of the class in the first and second year.
- Minor in computer science.

EXPERIENCES

Research internship, classification methods for resilience, Resilience Research Centre supervised by Jan Høltge, Halifax, Canada
May - August 2025, 3 months

- Developing classification methods in R to distinguish responses to adversity into three profiles ('resilient', 'non-resilient', and 'typical') for cross-sectional and longitudinal data.
- Conducting a literature review, adapting existing methods to resilience issues, and designing new approaches in collaboration with the supervisor.
- Co-authoring a scientific article currently in progress; responsible for the methods and results sections.
- Recipient of the MITACS Globalink Research Internship Award.

Research internship, reconstruction of Origin-Destination matrix, LMO supervised by Sylvain Faure and Bertrand Maury, Orsay
May - June 2024, 6 weeks

- Reconstructing origin-destination matrix from Lagrangian data, using optimization methods and statistical approaches implemented in Python.

Industry internship, Machine Learning, Orange, Rennes
May - August 2023, 3 months

- Designing and implementing a Python Machine Learning tool to predict optical-fibre installation failure using NLP and technical data

Maths C pour L, Société Mathématique de France, Amiens
June 2023, 1 week

Research internship, statistics and probabilities, IRMAR supervised by Nathalie Krell, Rennes
May - June 2022, 6 weeks

- Studying paradoxes in probability (e.g. Monty Hall): developing theoretical demonstrations, modelling in Python, and designing and analysing a statistical survey with another first-year student.
